# Autologous Skin Micrografting for Alopecia Androgenetic

CE  
0425

Listed in  
FDA

## DEFINE

Regenera Activa Therapy is an advanced and effective medical treatment that relies on capillary regeneration technique to combat alopecia and other hair loss problems. This technology from Spain has been proven and supported by multiple clinical studies to rejuvenate damaged hair follicles through the activation of the inactive areas in the scalp and reducing miniaturisation of hair follicles.

It is purely natural, using our own autologous micrografts to improve density of the existing hair, activate dormant cells under the scalp and stimulate the activity of inactive hair follicles.

## METHODOLOGY

The autologous skin micrografts contain progenitor cells, growth factors & extracellular matrix that are used in the regenerative process of renewing and growing new hair.

The precision engineered Regenera Activa device further divides them into smaller, more absorbable portions mixed with a solution suspension.

The doctor then prepares the micrografts to be reintroduced to areas of scalp that are experiencing hair loss.

The whole process takes about 30 minutes and there is no downtime involved. Just avoid washing hair for 24 hours, strenuous exercise for 48 hours and contact with chemical for 2 weeks.

Regenera Activa has gone through extensive clinical trials across the world, achieved CE approval and listed in FDA as a medical device.

Visible results can be seen in as soon as 4 – 6 weeks and effects can last for at least a year.\*

\*Individual results may vary.

## SUITABILITY

It is suitable for almost everyone. However for patients diagnosed with scarring alopecia, alopecia areata, on long-term anticoagulant, diagnosed with cancer or immune diseases would not be recommended. It is good to speak to your doctor on this.

## PHOTO EVIDENCES (Male and Female)

Images by Dr Xenia Vorobieva

## SUMMARY

- Single month for visible results
- Standardised procedure
- Simple and effective
- Without enzymes
- Single session
- Autologous
- Closed system
- No chemicals used

## EXTENSIVELY RESEARCHED
